

Check valve type RV01

Description:

Check valves allow the medium to flow just in one direction. If the flow of the medium changes the direction, the check valve will close automatically.

Features:

- suitable for neutral and not neutral **gaseous & liquid media**
- short length
- low opening pressure
- mounting between flanges
- mounting position: any

Connection:

DN15 – DN100

Temperature:

-10°C to +300°C
- depending on design

Pressure:

0,0 bar – 40,0 bar
- depending on design

Material body:

Stainless steel 1.4408

Material disc:

Stainless steel 1.4408, 1.4571 when soft seat design

Spring, spring cross :

Stainless steel 1.4436

Seal:

NBR

Temperature:

-20°C bis +90°C

EPDM:

-20°C bis +120°C

FPM:

-15°C bis +200°C

PTFE:

-20°C bis +250°C

Metal seated:

-20°C bis +300°C

Dimension:

DN	Inch	d	D	F	L	W	weight
15	1/2"	15	43	53	16	43	0,10
20	3/4"	20	53	63	19	53	0,16
25	1"	25	63	73	22	63	0,28
32	1 1/4"	30	75	84	28	75	0,52
40	1 1/2"	38	86	94	32	86	0,70
50	2"	47	95	107	40	95	1,10
65	2 1/2"	62	115	126	46	115	1,58
80	3"	77	131	145	50	131	1,78
100	4"	96	150	164	60	150	3,30

Face to face acc.: DIN EN 558-1 line 49

flange acc.: DIN EN 1092-1 PN6/10/16/25/40

Installation Instruction:

The following aspects have to be observed during the installation of disco check valves:

- Possible damages to the disco check valves and O-rings have to be checked prior to installation. Check if the valve can be moved. Damaged parts must not be installed.
- Make sure that only those disco check valves are installed, that meet the operational requirements regarding pressure category, chemical resistance, connection and dimensions.
- Make sure to install a minimum of 5 x nominal diameter of straight pipeline in front of and behind the swing check valve. Do not install the valves directly onto a pump flange.
- Avoid pulsation and pressure impact.
- Watch throughput direction (see arrow on the plate) !
- They are put in their central position according to the outer diameter of the body and the flange screw inner side.
- Tighten the flange screws crosswise regarding the torque required.

After the installation, check the tightness of the connections by a pressure check.

General safety advices:

The safety advices for the pipe system, in which the valves are to be mounted, are to be followed. The same applies to the check valves.

In pipe systems, where our check valves are to be used, the planning/installing person and the operator are responsible for the following issues:

- The check valves is to be used according to the regulation in p.1
- The pipe system is to be installed correctly and its operation is to be checked regularly
- The check valves is to be mounted, removed and repaired by qualified personnel only. The staff is to be regularly instructed according to all relevant regulations concerning working safety and environmental protection, especially in the field of pipes under pressure.
- These staff members have to be informed about the manual and the advices included.

Maximal working pressure / opening pressure:

DN		Kv-Wert	Working pressure	Opening pressure at flow direction mbar			Required back pressure
SIZE		m3/h	bar				bar
15	1/2"	2	0 - 40	47	44	51	0,3
20	3/4"	7	0 - 40	44	39	48	0,3
25	1"	13	0 - 40	57	53	61	0,3
32	1 1/4"	17	0 - 40	47	41	52	0,3
40	1 1/2"	23	0 - 40	38	32	43	0,3
50	2"	48	0 - 40	45	38	52	0,3
65	2 1/2"	55	0 - 40	50	44	55	0,3
80	3"	83	0 - 40	31	23	39	0,3
100	4"	127	0 - 40	55	45	65	0,3

Pressure loss:

Test meeting the requirement of PED acc. to DIN EN 12266:

The tightness corresponds to the specified leakage rates**:

Type	Soft seat*	Metal seat
RV01	A	≥ G

* Soft seat: EPDM, FPM/FKM/Viton, PTFE, NBR

According to EN 12266-1 / in order to achieve the specified leakage rate, a back pressure of at least 0,3 bar is required.

Media phase: gasoeus or liquid, if pD > 0,5 bar (steam pressure)

Structure article number:

Type	Flange	Seal	size
